

IN THE SPECIFICATION

Please replace the paragraph at page 9, lines 20-26, with the following amended paragraph:

A1 In response to the query, the service control point 260 executes its internal 711 service logic and signals back to the inquiring service switching point 211 with the toll free telephone number corresponding to the appropriate telecommunications relay service center. The service switching points 211 then access a toll free database 290 245 to obtain a routing telephone number or carrier identification code of the interexchange carrier that serves the toll free number. An exemplary toll free database 290 245 is a line identification database (LIDB) version R7.5.
